Wiring diagram

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the

detection range of the sensor. In accordance with standard EN 60947-5-7, quadratic targets in a range of sizes ($20 \times 20 \text{ mm}$, $100 \times 100 \text{ mm}$) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

Setting the limit values The ultrasonic sensor has an analog output with teachable measuring range. Teaching is implemented via the teach adapter. The green and yellow LEDs indicate whether the sensor has detected the object.

Teach

Connect the TX1-Q20L60 teach adapter between the sensor and connection $\mathop{\mathsf{cable}}^{\cdot}$

- · Position object for remote limit value • Press the button against Ub for 2 - 7
- seconds
- · Position object for close limit value
- Press the button against Ub for 8 11 seconds

Optional: Inversion of analog output • Press the button for 12 - 17 seconds

LED response

Successful teaching is displayed with a fast flashing LED. Thereafter, the sensor automatically runs in normal operating mode. Unsuccessful teaching is indicated by the LED flashing alternately green and yellow. In normal operation, the two LEDs indicate the status of the sensor.

• Green: Object within the detection range, but not in the measuring range

Yellow: Object is within the measuring range
Off: Object outside the detection range or
signal loss
