

TEMPERATURE AND ENVIRONMENT MONITORING

MONITORE * CONTROL * ALERT *
RECORD * ANALYZE

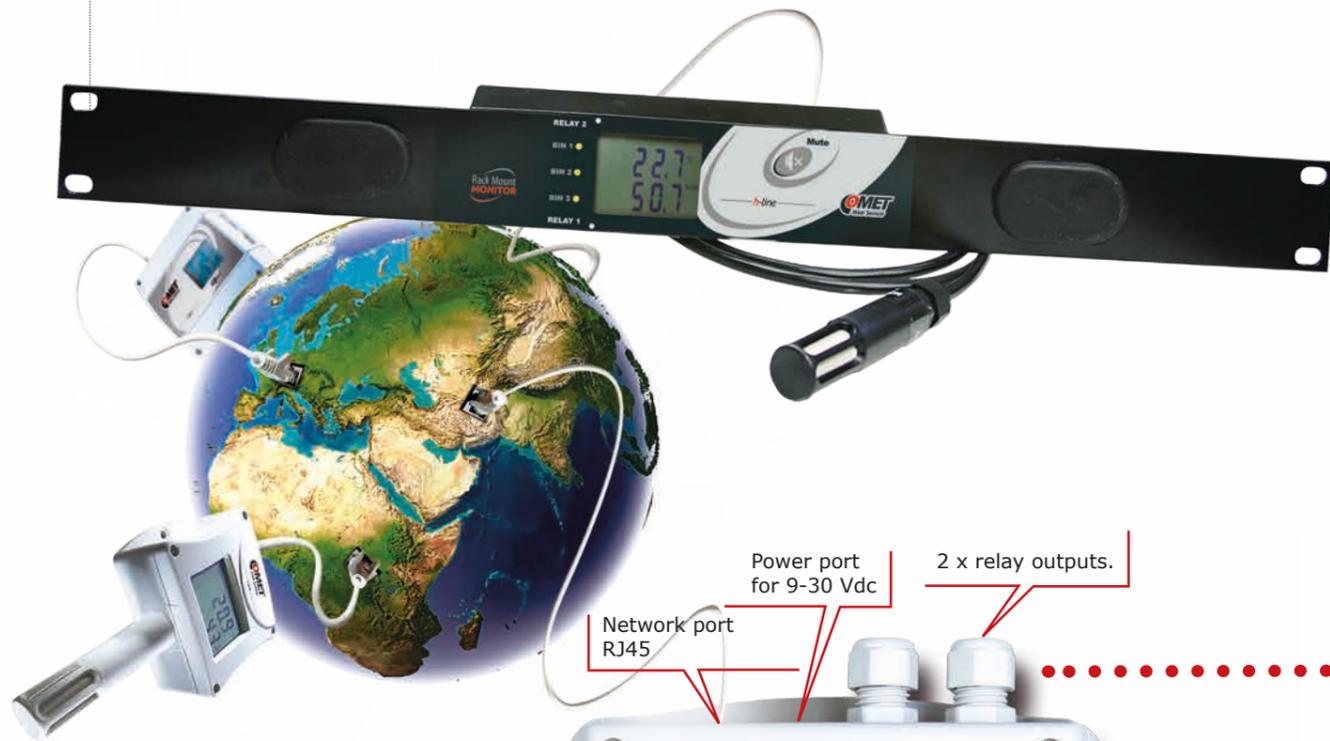

A Solution for every need and every budget

Offers built-in temperature
and humidity sensors and
allows external detectors
to be added

OMET
since 1991

Rack mounted design

Monitor

temperature, humidity, CO₂,
flood, power, smoke, room entry

Alert

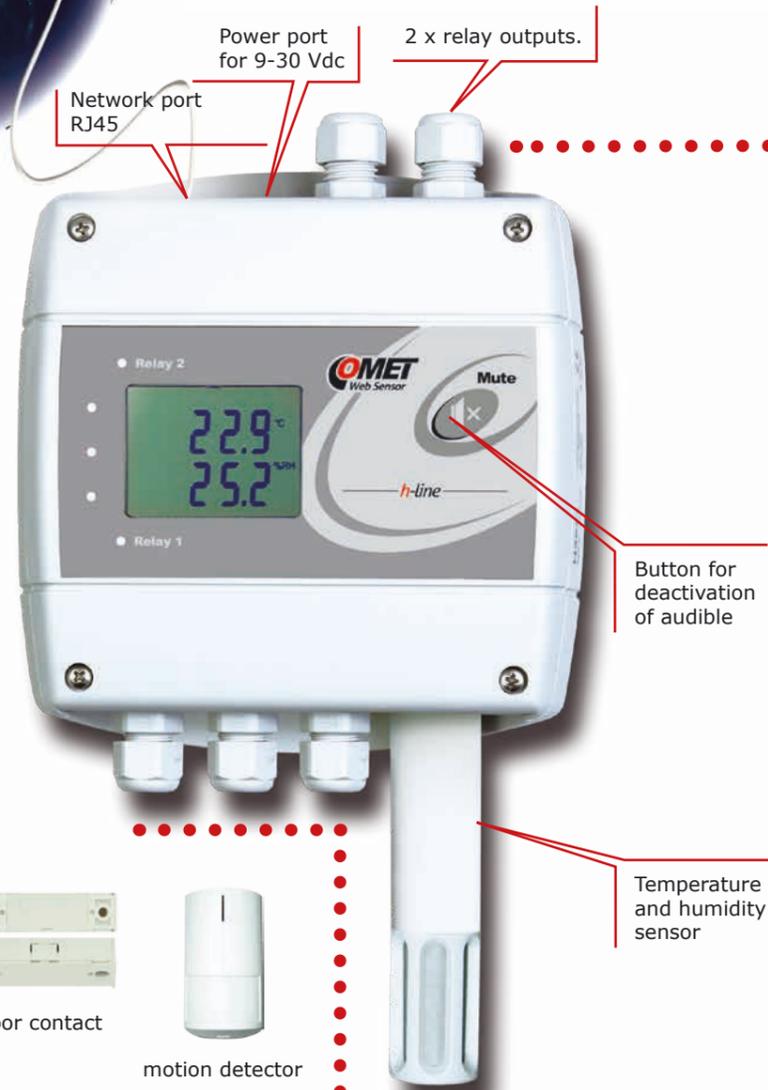

allows unlimited alerts notification; notification via emails and internet protocols; allows automatic shutdowns

Record and Analyzation

data storage in CSV file or in the Comet Database
software based on MS SQL

Wall mounted design

Three inputs for detector connection- dry contact, open collector, two-state voltage signal.

smoke detector

flood detector

door contact

motion detector

Temperature and humidity sensor

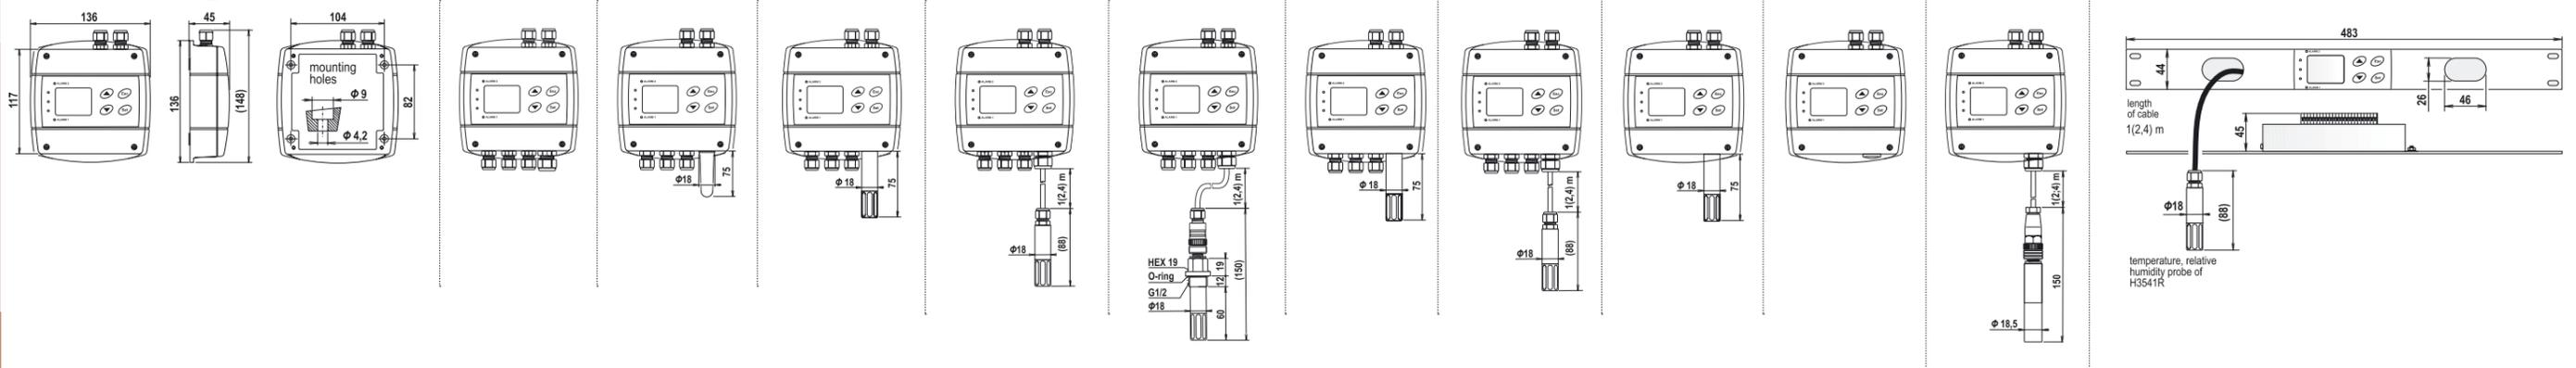

Button for deactivation of audible

Comet Database software offers:

- data stored in one place and accessible
- with Comet Database Viewer
- to provide data in table and graph
- to print and export data
- alarms via SMS texts and emails
- acoustic and visual signalization of alarms
- compatibility with all Comet System devices and 3rd party devices
- displaying of online values

If you want to integrate Web Sensor to your system

ModbusTCP protocol

Modbus protocol for communication with SCADA systems or third party software. Device use version of Modbus TCP protocol.

SNMP protocol

SNMP version 1 protocol for IT infrastructure. Using SNMP protocol you can read actual measured values, alarm statuses and alarm parameters. MIB tables with OID description are available.

SNMP Trap

SNMP Trap for IT infrastructure. The device allows sending Traps to selected Trap receiver server. Traps are sent in case of alarm on channel or at error states.

SOAP protocol

The device allows to send currently measured values via SOAP v1.1 protocol. The device sends values in XML format to the web server. The advantage of this protocol is that communication is initialized by the device side. Therefore it is not necessary to use port forwarding.

Syslog protocol

Syslog protocol for IT infrastructure monitoring systems. The device allows sending text messages to selected Syslog server. Messages are sent in case of alarm on channel or at error states.

SNTP protocol - time synchronization

Time synchronisation with SNTP server. Actual time is shown at web pages and is necessary for time-stamps inside CSV files.

Actual values via XML

XML protocol for actual measured values reading. This protocol is suitable for Web Sensors integration into 3rd party SCADA systems.

Mounting accessories

MP047
Universal holder for probes for easy mounting to rack 19".

Protection of sensors

F5300 - Teflon (PTFE) sensor cover (white colour), with increased resistance against splashing water, non-absorbent surface, does not rust. Porous size 25µm. Temperature range -40°C to +125°C.

F5200 - Grey sensor cover with filter from stainless steel mesh, filtering ability 0.025mm.

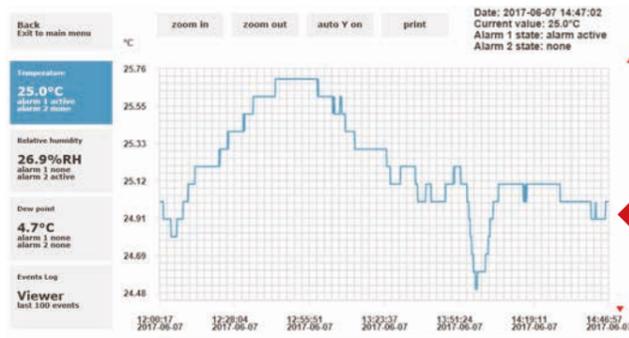

F0000 - Sintered bronze sensor cover. Filtering ability 0.025mm.

F8100 - Solar radiation shield for transmitters with T+RH probe on a cable.
